## • Select Start List

• Click Create Excel Template – save to the Desktop

Create Excel Template	Import From Excel Template

## • Fill in relevant fields (if no entry number – combination will not pull through) and Save

_	Do not alter the structure of this spreadhsheet, or any cells outside the data entry region as this may corrupt the data when imported. Use X, Y or Yes to indicate that the combination is competing in a competition.

• Go back to your App and click Import from Excel Template and find the Excel document

Create Excel Template	Import From Excel Template

• This will then pull all entries through. You can still add more on if needed (with different entry numbers)
